

Module 3 Quality - Stability

3.2.P Drug Product

3.2.P.1 Description and Composition of the Drug Product

Cardiostat 10 mg film-coated tablets contain Cardionil hydrochloride as the active substance.

3.2.P.8 Stability

3.2.P.8.1 Stability Summary and Conclusions

The proposed shelf life of Cardiostat 10 mg film-coated tablets is 24 months.

The recommended storage condition is: Store below 25°C.

The shelf life is justified based on limited available long-term stability data and supportive accelerated stability data.

The stability conclusion states that the drug product remains within proposed specifications during the available study period.

Note:

The justification for the proposed 24-month shelf life is brief and does not clearly explain all data trends.

3.2.P.8.3 Stability Data

Batch B001 and Batch B002 were placed on long-term and accelerated stability studies.

Available long-term data support continued monitoring of assay, degradation products, dissolution, and appearance.

Stability data tables are summarized in this section.
