

# Module 5 Clinical Study Report

## Module 5 Clinical Study Report

Study ID: CSR-CARDIO-101

Study Title: A randomized controlled study of Cardiotat 10 mg tablets in adult patients with hypertension.

### 1. Ethics

The study was conducted in accordance with ethical principles and informed consent requirements.

### 2. Investigators and Study Administrative Structure

The study was conducted at multiple clinical sites.

### 3. Introduction

Cardiotat is being developed for treatment of hypertension.

### 4. Study Objectives

The primary objective of the study was to evaluate the effect of Cardiotat on heart rate reduction from baseline to Week 12.

### 5. Investigational Plan

The study used a randomized, double-blind, parallel-group design.

### 6. Study Patients

Adult patients with mild to moderate hypertension were enrolled.

### 7. Efficacy Evaluation

The primary endpoint reported in this Clinical Study Report is heart rate reduction from baseline to Week 12.

### 8. Safety Evaluation

A total of 5 serious adverse events were reported during the treatment period.

No deaths were reported.

### 9. Discussion and Conclusions

The study suggests potential clinical benefit. Further review is required to align endpoint and safety reporting with the Clinical Summary.
